1. You are required to design two screens as shared below using Autolayout. The design resources for the screens have been attached with the email.

2. Now suppose that you are provided with static login credentials as
   User name = "any user name" (Here user can enter any Kind of String)
   Password = 123456 (Here user have to enter the specified password)

   ● If the user enters password correctly and taps on the login button in Login Screen he will be able to see the Notification screen. On the notifications screen, users will be able to see the username with a welcome greeting. Also the list shown here is static. You have to populate this list with any kind of static data.
   ● If a user enters an incorrect password three times the login button will get disabled and the user will not be able to enter the Notification page.
     In this case you have to show a message (Toast or Snackbar) as "You are blocked from the app".

1) Login Screen

2)Notification screen

← **Notification**

Welcome User Name !
